Project Title:

Custom Strategy Builder and Call Dispatcher for Tradeearth Algo Trading Product

Project Description:

The objective of this project is to develop a system that enables users of the TradEarth app to instantly generate customized trading strategies based on their input parameters (such as number of trades, market type like Nifty/BankNifty, and technical indicator thresholds). This will automate the existing manual process.

The project involves the development of REST APIs and the integration of Kafka/message queues to handle real-time, multi-user trade execution. The solution will be built using Python and initially hosted locally, with future deployment planned on AWS infrastructure.

This live project is being executed under the guidance of the TradEarth technical team and will follow industry-standard development workflows. We believe this project will provide valuable hands-on experience and practical exposure to the students.

We wish them all the best for their efforts.

Sincerely,

[Signature & Seal]
